

Zelda

By Our3

Takeaway:

We built a functioning system of title for
real-world goods in 3 weeks

Features

- Makers can create digital tokens representing their real-world products.
- Buyers can buy products from the collections listed by makers.
- Makers can generate QR codes corresponding to purchases from buyers.
- Buyers can view their currently owned tokens.

Powered by

- **Pinata's** IPFS API for storage of collection metadata and images
- **Polygon** for speedy transactions and low fees
- **Covalent** for event-dependent execution and views of currently owned tokens

What's next?

- Create trust tiers for token makers.
- Allow makers to mint batches of tokens to reflect whole product lines.
- Allow buyers to generate tokens for items they already own.
- Allow for automatic delivery of token hardware links (QR codes).
- Store token history/provenance on chain.
- Marketplace features to allow users to search
